Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the best answer to each of the following questions.

Artificial intelligence (AI) is transforming industries, from healthcare to education. However, as AI technologies advance, the risk of AI abuse also increases. AI abuse refers to the misuse of AI systems to harm individuals or manipulate society. Common forms include deep fake videos, where faces and voices are digitally altered to create fake content, and data manipulation, which involves AI algorithms influencing public opinion through misleading information. **AI abuse is a growing concern as these systems become more accessible, raising ethical and safety issues for individuals and societies alike.**

[I] One example of AI abuse is in social media, where AI-driven bots spread false information. [II] These bots, designed to imitate real users, can post, comment, and interact with others, making it difficult to distinguish between genuine and fake content. [III] As a result, **they** can change opinions on political and social issues, sometimes with harmful consequences. The speed at which these bots operate allows misinformation to spread rapidly, posing challenges for fact-checkers and social media platforms in controlling false narratives. [IV]

Another area where AI abuse has gained attention is privacy invasion. Facial recognition technology, for example, is often used by authorities for security. However, some private organisations use it without consent, tracking individuals in public spaces and selling the information to advertisers. This practice violates personal privacy and has **sparked a debate about** the ethical use of AI.

To combat AI abuse, experts suggest stricter regulations and improved awareness. Laws need to address emerging technologies and prevent the misuse of AI systems. Additionally, educating the public on identifying AI-generated content can **empower** individuals to navigate the digital world safely. As AI continues to evolve, establishing clear ethical guidelines will be essential to prevent its harmful uses and to ensure that AI remains a tool for positive change.

Question 12. Which of the following best paraphrases the underlined sentence in paragraph 1?

- A. As AI becomes more available, its misuse is becoming a bigger issue, leading to ethical and safety concerns for people and communities.
- B. AI systems are now more advanced, making them completely safe and free from ethical problems.
- C. AI abuse is decreasing as these systems become more accessible, leading to fewer concerns about ethics and safety.
- D. The increasing use of AI has eliminated many ethical and safety issues for individuals and society.

- A. Educating the public can help them recognise AI-generated content.
- B. Some private organisations use facial recognition technology without consent.
- C. Facial recognition technology is only used by authorities for security.
- D. Social media bots can spread misinformation quickly.

Question 20. Which of the following can be inferred from the passage?

- A. AI bots are rarely able to impact political discussions.
- B. Not all uses of AI are harmful, but misuse can lead to serious issues.
- C. Regulating AI will completely stop AI abuse.
- D. Facial recognition is only a concern when used in public spaces.

Question 21. Which of the following best summarises the passage?

- A. Social media bots and facial recognition technology are two common forms of AI abuse with serious consequences.
- B. The rapid advancement of AI makes it harder to regulate, increasing the risk of misuse in society.

Early Warning Systems !

People may take steps to reduce the impact of a natural hazard when they are aware that it is likely to occur. But how can people recognize they are in danger? Scientists use many methods to help predict when natural hazards are likely to happen.

Seismometers measure earthquake activity. An increase in small earthquakes can mean a larger earthquake is about to happen or a volcano is becoming more active. If a volcanic eruption is predicted, people can **evacuate**, or move to safer areas. Governments can prepare emergency supplies, such as food and water. Emergency workers can be ready to help with injuries. All of these steps reduce the impact and help save lives.

Scientists use several devices and methods to constantly collect information about a volcano's activity. Radio transmissions allow the data to be sent instantly to a monitoring system. Scientists can tell what is happening with a volcano almost as soon as it happens. They can also use that information to predict what is likely to happen next.

Besides tracking seismic activity, scientists also monitor gases, temperature and water at a volcano site. A change in the amount of carbon dioxide and others given off by the volcano can be measured to comprehensive analysis of these factors help scientists improve eruption predictions and enhance public safety.

Question 28. Which of the following is NOT mentioned as a method scientists use to predict natural hazards?

- A. Observing temperature changes in rocks
- B. Measuring earthquake activity
- C. Monitoring gases released by a volcano
- D. Studying animal behavior before an eruption

Question 29. The word **evacuate** in paragraph 2 is OPPOSITE in meaning to _____.

- A. relocate
- B. return

- A. Scientists can predict exactly when and where a volcano will erupt.
- B. Scientists can foretell volcanic activity by staying near the volcano.
- C. Scientists are able to predict volcanic activity long before it occurs.
- D. Scientists can quickly detect and analyze volcanic activity in real time.

Question 32. The word **comprehensive** in paragraph 4 could best be replaced by _____.

- A. detailed
- B. inaccurate
- C. simple
- D. limited

Question 33. Which of the following is TRUE according to the passage?

- A. Seismometers not only measure earthquake activity but also have the ability to stop earthquakes and volcanic eruptions from happening.
- B. Even with warning signs of a volcanic eruption, evacuation is unnecessary since volcanic activity rarely threatens human lives.
- C. If a volcanic eruption is predicted, governments can prepare emergency supplies like food and water to reduce the disaster's impact.
- D. Scientists are unable to predict natural hazards, so people and governments always face disasters without any warning.

Question 34. In which paragraph does the writer discuss monitoring various natural factors to predict a volcanic eruption?
